

PrimulaDigital is a Startup Company focused on DevOps based in **TechBase** in Regensburg. With our services and backend components we are helping our German and international clients to manage their cloud infrastructure more efficiently and effectively.

To reinforce our team in **Regensburg** we are looking for people who, like us, are focused on automation, reproducibility and reliability.

Linux System Administrator (m/w/d)

After an onboarding and training period, you will support directly one of our clients.

Responsibilities

- Analyze, consolidate and document Linux system landscapes
- Operate, maintain and monitor the Linux environments of our clients
- Monitor system availability and react to alarms
- Control performance of the system
- Manage the operational security
- Build dashboards and track metrics for the production systems
- Create of operational concepts
- Installation and configuration of automation tools (Puppet, Ansible, Salt)

Qualifications

You must provide some of the listed qualification and be ready to obtain the others when requested.

- Linux knowledge (preferably Ubuntu)
- Scripting: Python, Perl, bash
- JavaScript, Node.js, express.js
- Automation tools: Puppet, Ansible, Salt, Jenkins
- Implementation and administration of CI/CD Pipelines, proficiency with build tools and git
- Fluent in English and German

We offer

- Working with advanced technology and tools
- Fast execution on good ideas
- Training opportunities and support in certifications programs (i.e. AWS)
- Stimulating working environment
- Competitive salary package
